### 27<sup>th</sup> April 09 - A sneak pre-view – EarthCruiser External Pictures

The side skirts, twin tool boxes, and battery covers went on EarthCruiser this week which allows us to give you a pre-view of what EarthCruiser looks like.

Camp set and awning out for a quick lunch stop.

Camp set with roof up

Moving through the bush is easy without the camper body protruding beyond the outside dimensions of the cab.

The 3 x 64 watt Solar Panels are flat mounted on roof and provide free energy to the two 110Ah house batteries. The vehicles alternator also charges the house batteries, but only after the VSR (Voltage Sensitive Relay) has detected the vehicle batteries are fully charged.

The Kinetic stress-free attachment between camper module and the torsion elastic truck chassis allows the truck chassis to flex without affecting the camper. In these pictures the body is only partly flexed.
