### EARTH CRUISER

The EarthCruiser is a unique 4x4 camper which provides safe and reliable travel in addition to long term luxurious accommodation. It is

the ultimate all terrain expedition vehicle for extended and comfortable travel with specially designed soft ride/hard road suspension kit. It is capable of negotiating long distance desert crossings and endless kilometres of corrugated and rough outback roads in comfort. At the end of the travelling day EarthCruiser can provide a hot shower, a cold drink from the fridge, and a comfortable bed for the night. The EarthCruiser is self-sufficient in every respect with no gas or power connections needed. The all up weight is below 4500kg allowing operation on a standard car drivers licence, lower registration costs, and a good power to weight ratio for real off-road ability and agility.

The EarthCruiser is built on a FG84DC Mitsubishi Fuso Canter 4x4 cab light truck chassis which brings dramatic styling, with plenty of head, leg and elbow room, easy to read instrumentation, tilt/telescopic steering wheel, adjustable seating and dash-mounted gear shifter. In its standard form it offers two comfortable seats with a third drop-down centre seat. The 4 cylinder diesel engine comes with a standard 125L fuel tank with optional 90L additional tank which extends the travelling range from 650Kms to 1300kms for highway driving. The vehicle is 5.65m long, 2.06m wide, 2.51m high and has a 260mm ground clearance.
